First, you must pick a product on which to enter a bug:

Apps: Application goodies that extend the Xfce desktop environment.

Airconfig: Airconfig is a cross-desktop wireless network configuration GUI written in plain C+GObject, with a Gtk+ GUI on top of it. Airconfig aims to be simple, small, and fast, and make use of other existing desktop infrastructure (such as D-Bus, HAL, and wpa_supplicant) to do most of its heavy lifting.

Gigolo: Gigolo is a frontend to easily manage connections to remote filesystems using GIO/GVfs

Mousepad: Mousepad is a fork of the lightweight Leafpad text editor that aims to make it more Xfce-ish.

Orage: Orage is a simple time-management application that provides a calendar and reminders for important events.

Parole: A Gstreamer based Media player.

Ristretto: Fast and lightweight image viewer for Xfce.

Squeeze: Squeeze is a lightweight archive manager, designed for modularity and the ability to reuse its core functions in other applications.

Xfbib: Xfbib is a lightweight BibTeX editor developed for the Xfce desktop manager. The intentions of Xfbib is to provide an easy and efficient way of editing BibTeX files.

Xfburn: Xfburn is a simple CD burning tool.

Xfce4-dict: The Dict plugin allows you to look up definitions of words in a dictionary.

Xfce4-mixer: The Xfce mixer is a panel plugin and a standalone application that can be used to control sound volumes.

Xfce4-notifyd: A themable notification daemon implementing the freedesktop.org notifications specification.

Xfce4-screenshooter: Application and panel plugin to take screenshots.

Xfce4-taskmanager: Easy to use task manager.

Xfce4-terminal: Xfce4-terminal is a modern terminal emulator with tab support and a drop-down window.

Xfce4-volstatus-icon: System tray icon that allows for safe removal of removable devices.

Xfmedia: Xfmedia is an audio and video player based on libxine. It's designed to take up little desktop space and manage playlists in a simple, usable manner. NB: Xfmedia is currently unmaintained. Bugs filed against it may go ignored until/unless a

unmaintained. Bugs filed against it may go ignored until/unless a new maintainer steps forward.

Xfmpc: Music Player Daemon (MPD) client written in GTK+.

Xfvnc: XfVNC is a lightweight VNC viewer front-end written in GTK+.

Art: Eyecandy for the Xfce desktop environment.

Xfce4-icon-theme: The default icon theme for Xfce.

Bindings: Bindings for the Xfce desktop environment or GTK+.

PyXfce: PyXfce is a set of Python bindings for Xfce.

thunarx-python: Python bindings for the Thunar Extensions framework

XFC: The Xfce Foundation Classes are C++ bindings for the entire Gtk stack. XFC aims to also wrap the Xfce core libraries as well.

Xfce4-perl: Perl bindings for the Xfce 4 core libraries.

Xfce4-vala: Vala bindings for the Xfce framework.

Panel Plugins: Plugins for the Xfce panel.

Xfce4-battery-plugin: The Battery plugin displays the current charge on your laptop's battery, and warns you when it dips too low.

Xfce4-calculator-plugin: Calculator plugin for the Xfce panel

Xfce4-cddrive-plugin: Panel button to open or close the CD-ROM drive tray.

Xfce4-cellmodem-plugin: Cell modem monitor plugin for the Xfce panel.

Xfce4-clipman-plugin: The Clipman plugin stores a history of items pasted to the clipboard for later retrieval.

Xfce4-cpufreq-plugin: The CPUFreq plugin allows you to view and control the CPU speed and CPU frequency scaling governor in use.

Xfce4-cpugraph-plugin: The CPU Graph plugin can display information about system resources in a variety of manners.

Xfce4-datetime-plugin: The datetime plugin displays the date and time (in a customisable format) and shows a calendar when right-clicked.

Xfce4-diskperf-plugin: The diskperf plugin displays performance-related information for hard drive partitions.

xfce4-embed-plugin: Embed arbitrary windows into the panel

Xfce4-eyes-plugin: The Eyes plugin embeds a pair of floating eyes into the panel, much like the standalone "xeyes" application.

Xfce4-fsguard-plugin: The FSguard plugin watches your partitions and displays colour-coded icons depending on how much free disk space remains.

Xfce4-generic-slider: Pass a value to a command.

Xfce4-genmon-plugin: The GenMon plugin is a generic plugin that cyclically runs a specified script or program, and displays its output.

Xfce4-indicator-plugin: Display information from various applications in the Xfce panel.

Xfce4-mailwatch-plugin: The Mailwatch plugin is a brand-new mail watcher plugin that support local mbox and maildir spools, as well as IMAP (secure and plain text).

Xfce4-menu-plugin: The Xfce Menu plugin displays a button that pops up the xfdesktop applications menu when clicked. This plugin is part of the Xfdesktop package.

Xfce4-mount-plugin: A mount/unmount utility for the panel.

Xfce4-mpc-plugin: A simple Musicpd client plugin for the Xfce panel.

Xfce4-netload-plugin: The netload plugin displays the current throughput of your network interfaces.

Xfce4-notes-plugin: The Notes plugin allows you to post "sticky notes" to your desktop.

Xfce4-places-plugin: Provides a menu similar to the GNOME places menu. It contains special folders (such as home, desktop, trash) and things like GTK+ bookmarks.

Xfce4-quicklauncher-plugin: This plugin allows you to have lots of launchers in the panel. They can be displayed in several rows.

Xfce4-radio-plugin: Plugin to control your V4l radio device.

Xfce4-sample-plugin: Example plugin to show the panel plugin features of the panel. Also a good base for starting a new plugin.

Xfce4-sensors-plugin: Hardware sensors plugin. Displays fan speed and disk temperature etc.

xfce4-smartbookmark-plugin: Query websites from the Xfce panel

xfce4-smartpm-plugin: A panel plugin that checks for package updates using the Smart Package Manager (smartpm.org)

Xfce4-stopwatch-plugin: This plugin keeps track of elapsed time - right on your panel.

Xfce4-systemload-plugin: The System Load plugin displays the real-time status of several different system resources.

Xfce4-time-out-plugin: A plugin forcing you to take periodical breaks from the computer.

Xfce4-timer-plugin: Panel plugin to set a countdown or time alarm.

Xfce4-trigger-launcher: The Trigger Launcher is a two-state toggle button that allows you to do "on/off" actions at the click of a button.

Xfce4-verve-plugin: The Verve plugin is an advanced command-line plugin with auto completion.

Xfce4-wavelan-plugin: The WaveLAN plugin displays the status of wireless network interfaces.

Xfce4-weather-plugin: The Weather plugin can display various data about your local weather.

Xfce4-wmdock-plugin: Compatibility layer for running WindowMaker dockapps inside the Xfce panel.

Xfce4-xfapplet-plugin: Embed GNOME panel plugins in the Xfce Panel.

Xfce4-xfswitch-plugin: Plugin for switching between sessions of different users.

Xfce4-xkb-plugin: The Xkb plugin displays an icon on the panel corresponding to the current keyboard layout, and can also change the layout.

Xfce4-xmms-plugin: The XMMS plugin allows you to control XMMS from the panel.

Thunar Plugins: Plugins for the Thunar file manager.

Thunar-archive-plugin: Adds "Create Archive" and "Extract Archive" actions to the file managers context menu.

Thunar-media-tags-plugin: This plugin integrates TagLib into Thunar and provides a new page for the file properties dialog when viewing audio files, which allows the user to edit ID3 tags, and a renamer module, which allows the user to rename audio files using their ID3 tags.

Thunar-shares-plugin: A Thunar file manager extension to share files using Samba. The backend is based in nautilus-share plugin.

Thunar-thumbnailers: Additional thumbnailers for Thunar.

Thunar-vcs-plugin: Add support for SVN and GIT repositories to the file manager context menu.

Thunar-wallpaper-plugin: This plugin allows you to set the Xfce desktop background image using the context menu in Thunar.

WWW: Bugs and suggestions related to *.xfce.org published websites.

archive.xfce.org: Download archive and subscription for new mirrors.

blog.xfce.org: The Xfce Developers' Blog.

bugzilla.xfce.org: The Xfce Bugtracker

git.xfce.org: Problems with the admin interface or the cgit install at git.xfce.org itself.

goodies.xfce.org: The Xfce Goodies website.

i18n.xfce.org: The Xfce internationalization website, dealing with translating Xfce into other languages.

releases.xfce.org: Moka, the Xfce release manager website.

thunar.xfce.org: The home of the Thunar file manager.

wiki.xfce.org: Problems with the Xfce wiki. Note that we have NO control xfce.wikia.org, and don't want to hear about problems with it.

www.xfce.org: The main Xfce website.

Xfce: Core components of Xfce, like the window manager, desktop, panel and file manager.

Exo: Exo is an Xfce library targeted at application development. It contains various custom widgets and APIs extending the functionality of GLib and GTK+. It also ships utilities for defining preferred applications, mounting storage devices and more.

Garcon: An implementation of the freedesktop.org menu specification used in Xfce that only depends on GLib and GIO.

Gtk-xfce-engine: The GTK theme engine for the Xfce desktop.

Libxfce4ui: Libxfce4ui is used to share commonly used Xfce widgets among the Xfce applications.

Libxfce4util: Utility library (non-GTK) for the Xfce desktop environment.

Thunar: The Thunar project aims to develop a new file manager. Thunar's main goal is to be fast, easy-to-use, and simple.

Thunar-volman: Volume Management integration for the Thunar File Manager, which provides automatic handling of removable drives and media.

Tumbler: A D-Bus thumbnailing service based on the thumbnail management D-Bus specification.

Xfce4-appfinder: The Xfce Appfinder is a program that searches your file system for .desktop files, and displays a categorized list of all the GUI applications on your system.

Xfce4-dev-tools: The development tools are a set of m4 macros for use in configure scripts.

Xfce4-panel: The Xfce Panel including all plugins shipped with the default panel installation.

Xfce4-power-manager: Power manager for Xfce.

Xfce4-session: The Xfce Session Manager controls the loading of applications when Xfce is started. It also handles logging out, shutting down, and rebooting.

Xfce4-settings: Settings manager of the Xfce desktop.

Xfconf: Xfconf is a flexible, easy-to-use configuration management system. While it was written with Xfce in mind, it is by no means Xfce-specific. This is NOT a place to file bugs about particular settings, or any settings dialogs. This is about the configuration management daemon, library, and related tools ONLY.

Xfdesktop: Xfdesktop is the desktop manager. It draws the backdrop, and creates an applications menu and a window menu when you right-click or middle-click on the desktop.

Xfwm4: The Xfce window manager that draws decorations (borders and

title bar) around windows, controls the placement and behavior of windows, and governs how keyboard and mouse focus behaves in the desktop environment.
